

Spot effect: Hoek α_e

Enkel belichten indien $\cos \alpha > \cos \alpha_e$

$$(r_R^d \cdot d, r_G^d \cdot d, r_B^d \cdot d) \cdot \underbrace{\frac{(\cos \alpha - \cos \alpha_e)}{1 - \cos \alpha_e}}_{*}$$

als $\cos \alpha > \cos \alpha_e$

$$* = 1 - \left(\frac{1 - \cos \alpha}{1 - \cos \alpha_e} \right)$$

geeft uitdooft effect.
