

Willekeurig oppervlak

Bereken eerst $c = a \times b$
vectorieel produkt

$$\text{dan } (x, y, z) = (p_x, p_y, p_z) + u(a_x, a_y, a_z) + v(b_x, b_y, b_z) + w(c_x, c_y, c_z)$$

$$\Rightarrow (x, y, z) = (u, v, w) \begin{bmatrix} a_x & a_y & a_z \\ b_x & b_y & b_z \\ c_x & c_y & c_z \end{bmatrix} + (p_x, p_y, p_z)$$

→ is steeds inverteerbaar.
(want $c = a \times b$)
