

Inkleuren van een driehoek

geprojecteerde $\triangle ABC$

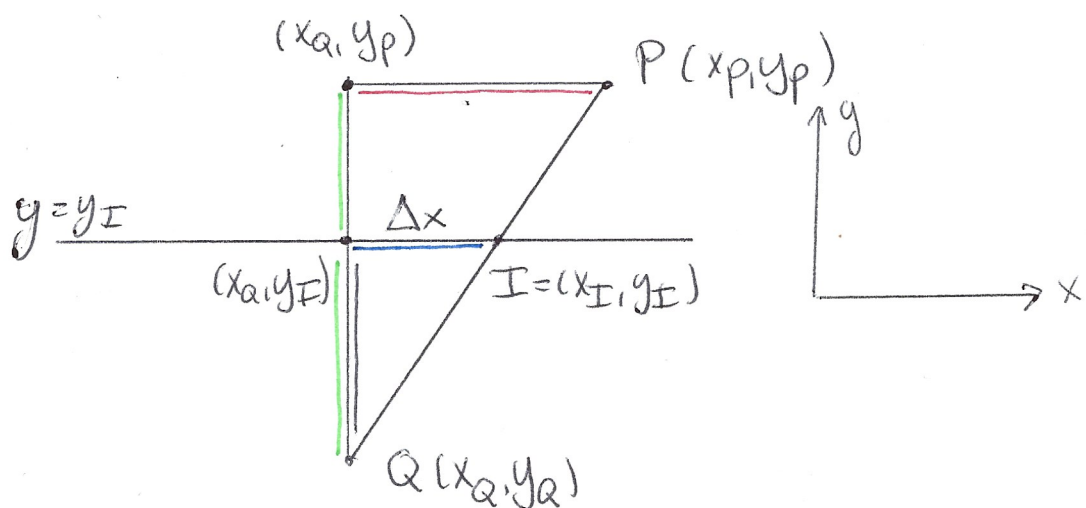

pixels bepalen gelegen in $\triangle ABC$, $\times \rightarrow$ rij per rij

y-waarden: $\min(y'_A, y'_B, y'_C) + 0,5$ tot $\max(y'_A, y'_B, y'_C) - 0,5$

x-waarden per rij: snijpunt van lyn $y = y_I$ & lijnstuk PQ

Zoeken x_I : géén snijpunt $y_I < y_P, y_Q$ of $y_I > y_P, y_Q$
 $\Leftrightarrow$ enkel snijpunt indien $(y_I - y_P)(y_I - y_Q) \leq 0$
 $y_P \neq y_Q$
